

Reduce Manufacturing Costs

Here's How:

With the OnTrack® Manufacturing Execution System from Portico, you'll increase productivity and eliminate non-value-add activities, reducing costs throughout your manufacturing operation.

Maximize Effective Scheduling

With OnTrack finite capacity scheduling, routings and operation steps are pre-defined before orders are dispatched. OnTrack provides the real-time status that manufacturing planners need prior to the release of an order, so no order is begun until all necessary resources are available.

Eliminate Costly Inefficiencies

In manufacturing, time is money. OnTrack electronically monitors activity in real time and gathers all relevant data on a specific order, machine, or operator so you can find and remove costly inefficiencies in your process. You'll eliminate the need for and cost of expeditors who manually track down order status. Plus, real-time alarms alert workers when an operation goes down, so problems are fixed with a minimum of productivity loss.

Fast, Accurate Communication

Because OnTrack communicates electronically, operators receive work and order instructions that are always up-to-date, available, and easily accessed. Electronic communication also eliminates time wasted by employees searching for lost or misplaced paperwork – they'll always have the information they need to do it right the first time, resulting in less re-work, less scrap, and lower costs.

Manages Your Process

OnTrack enforces structure and discipline on the factory floor, ensuring that the proper material and process flow is followed. Plus, OnTrack manages the proper operation sequence, which reduces costs associated with work in process (WIP) inventory, scrap, and re-work.

Make your entire operation more cost efficient by cutting manufacturing costs across the board with OnTrack from Portico.

Learn more about all the ways OnTrack helps you reduce manufacturing costs! Call (630) 717-6270 today for more information or visit our website at www.PorticoTechPartners.com.

Reduce Manufacturing Costs With Accurate Data Collection

Leverage MS M-DNA & SQL7

Data is captured, compartmentalized and processed without slowing system performance

OPC Client

Pre-integrated, machine and result data collection from PLCs, controls, SCADA, etc.

Bar Code Interface

Enable rapid data collection for material tracking, real time order status, product genealogy, etc.

Quickly and easily add MES functionality to your existing data or controls system:

- Component Tracking
- WIP Tracking
- Revision Control
- Routing Control

Significant Process Improvement From:

- Locating excess WIP
- Detecting inefficiencies
- Pinpointing non-value add activities
- Identifying bottlenecks
- Fast, accurate information

Data Collection By:

- Order
- Machine
- Operation
- Operator

OP = Operation
