

# Reduce Cycle Time

## Here's How:

Keep your factory floor on the cutting edge with the OnTrack® Manufacturing Execution System from Portico Technology Partners. OnTrack slashes manufacturing cycle time in four essential ways.

## Real-time Information Improves Efficiency

In manufacturing, time is money. OnTrack reduces down time because it electronically monitors floor activity in real time. Real-time alarms alert workers and managers when a machine goes down or an order falls behind; the sooner you're aware of a problem, the faster you can get up and running. Plus, OnTrack gathers all relevant data on each individual order, machine, and operator. So, you can find and remove inefficiencies in your process. You'll also eliminate the need for and cost of expeditors who manually track down order status on the floor.

## Faster, Better Communications Ñ Electronically

OnTrack saves time by eliminating set-up and processing errors because it delivers instructions electronically. Operators get instructions and configurations that are up-to-date, always available, and easily accessed. Video clips, diagrams, and electronic images reinforce training and ease language issues. For every step of the process, version control mistakes are minimized and the correct production sequence is enforced.

## Ensures Process Control

Acting as a central control system, OnTrack enforces structure and discipline on the factory floor, ensuring that the proper process and material flow is followed. OnTrack prevents new orders from entering the system until materials and labor are available and manages the proper operation sequence, reducing costs associated with work in process (WIP) inventory, scrap, and re-work.

## Information for Continuous Improvement

OnTrack delivers the information you need to continually squeeze excess time from the manufacturing process. Using valuable data from the floor – data captured, organized, and processed by OnTrack – you can identify bottlenecks and eliminate non-value-add activities. You'll make faster, better decisions about labor, equipment, and material utilization.

Cut manufacturing cycle time – start working with OnTrack from Portico and stop working around the clock.

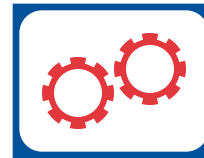

Learn about all the ways OnTrack helps you reduce cycle time! Call (630) 717.6270 today for more information or visit our website at [www.PorticoTechPartners.com](http://www.PorticoTechPartners.com).

# Reduce Cycle Time With Electronic Communications

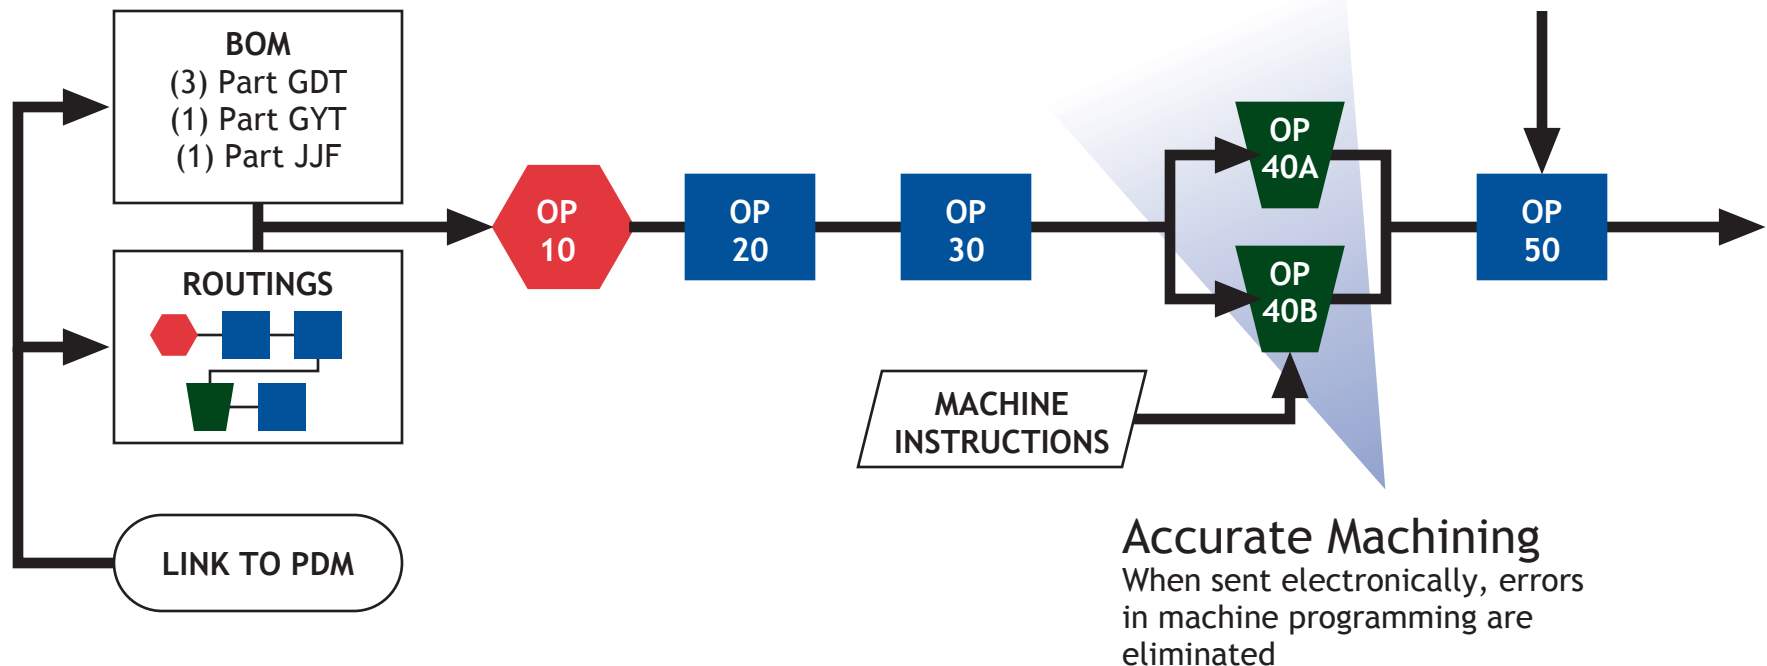

## Always Up To Date

Information is delivered to the specific operator who needs it when they need it – guaranteeing the absolutely latest version is used

## Images Ensure Quality

Diagrams, instructional graphics and video clips help operators understand how work is to be done while easing language issues

Paper is eliminated but information is never lost

OP = Operation
